✓ **Exact-dyadic sign/zero handling**

independent red-team pass

! **Strict HCP → Bai limit**

analytical target; still open

(b) Exact descriptor partition

algebraic roots

18

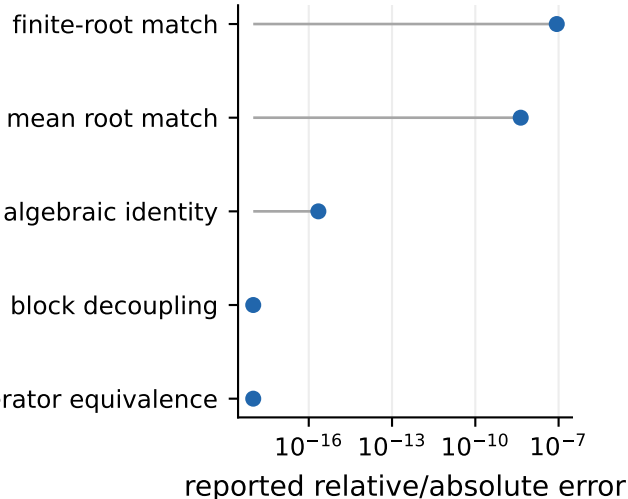

finite roots

69

root count in the 87-state descriptor

(c) Reduction and reconstruction residuals

(d) What is verified—and what is not

Closed numerical statement

87-state QZ descriptor = 69 finite generator roots + 18 structural infinite roots; no fictitious mass.

Open analytical statement

The present receipt does not yet prove controlled HCP slow-root convergence to Bai's scalar spectrum.
